EDUCATION

Cornell University

August 2023 - Expected May 2027

B.S. in Electrical and Computer Engineering (David A. Duffield College of Engineering)

Minor in Business (SC Johnson College of Business)

Relevant Courses: Digital Logic and Computer Organization, Computer Architecture, AI Hardware, Embedded Systems, Digital System Design with Microcontrollers, Microelectronics, Circuits, Signals and Systems, Linear Algebra, Data Science

Cumulative GPA: 3.4

TECHNICAL SKILLS

- **Programming:** Verilog, Assembly, Python, C, SQL, Lua, Git
- **Hardware & Engineering:** TinyRV1 Processor/ISA, Data Pipelining, Pipelined n-Core Processors, Caches, Arduino IDE, PCBs, Raspberry Pi Pico Microcontrollers, FPGA Development Boards, Breadboarding, LTspice, Soldering
- **Software & Tools:** DBever, DataGrip, GitLab, GitHub, VSCode, PyCharm, Google Workspace, Microsoft 365
- **Business:** Project Management, AACE Class Estimations, Primavera P6 Scheduling, Budgeting, FTE Rollup Calculations, FP&A

PROFESSIONAL EXPERIENCE

DEBUT Engineering Student Project Team – Cornell University

September 2025 – Present

Electrical Engineer, Research and Development Analyst, Senior Consultant

Ithaca, NY

- Optimized a novel elbow torque tracking biomedical device (Axio Recovery) through its ideation and development in collaboration with mechanical, electrical, and software engineers for the DEBUT VentureWell and BMES Medtronic Student Design competitions, placing as a finalist in the BMES Medtronic competition and winning the DEBUT VentureWell \$10,000 Venture prize
- Created high-level circuit diagrams and pin-mapping schematics for electrical components used in inertial and surface electromyography (sEMG) data collection, spearheaded circuit assembly and wiring between components, and documented findings into formal design reports for project managers and as a reference for future DEBUT projects
- Conducted experimental field-data collection and supported outreach to local subject-matter experts to gather technical feedback and inform project development
- Met with team members in frequent meetings to track progress, coordinate next steps, presented project milestones to faculty advisors and team leads, managed project progress using a team-wide Gantt chart

SSR Mining Inc.

June 2026 – August 2026, June 2025 – August 2025

Project Services Intern, Growth and Innovation Engineering Intern

Denver, CO

- Implemented project management skills in budgeting, estimating, scheduling, and PMIS systems to develop official project controls basis documentation of a project mine through various stages of its development and project definition
- Developed an interactive Plotly dashboard to visualize geographic positions of active drills across a mine site using satellite mapping, display current drill locations, and track drill-depth data over time through graphical and tabular views with refreshable data
- Developed SQL and Lua scripts within data-historian and database platforms to extract, transform, and organize processing-plant, haul-truck, and drilling data from multiple mine sites into structured tags for analysis, storage, and backup
- Collaborated with Mineral Extraction and Innovation teams to evaluate engineering practices and identify opportunities to improve value across ore extraction and processing operations

LEADERSHIP AND TEAMWORK

Cornell Engineering Excellence and Advising Programs – Cornell University

August 2025 – Present

Mathematics Academic Excellence Workshop (AEW) Facilitator, Peer Advisor

Ithaca, NY

- Led and managed weekly linear algebra and calculus workshops, collaborated with fellow facilitators across three semesters to review course material, develop lesson plans, and prepare presentations and worksheets for students to access outside of workshop sessions
- Led and provided mentorship, resources, and support to incoming students to Cornell's Duffield College of Engineering, met consistently with Cornell Engineering OIE and Advising staff and designated faculty and peer advisors to discuss best practices
